

Booking API Details

Endpoint : <https://logistic.warmindo.id/partner/v1/booking>

Method : POST

Note : This API requires *Basic Authentication*. Basic Authentication is a simple authentication scheme built into the HTTP protocol, which is commonly used to protect web resources. It involves sending a username and password with each HTTP request.

Last Updated : 17 October 2023

You have to define the request headers as below:

Name	Value
Content-Type	application/json
Authorization	Basic V2FoYW5hOjEyMzQ1Njc4OQ==

Booking Detail Fields

Field	Type	Description
number Required	String	Actual number for the shipment, usually provided by the Carrier/Logistics Service Provider. The number is needed, along with the Shipment's Carrier/Logistics Service Provider in order to retrieve track events.
is_dangerous_goods Optional	Boolean	Packaging of dangerous goods.
weight Required	JSON Object - Value (string) - Unit (kg) : float	Weight of the shipment. To provide the value and unit code, separated by a space. Example: 0.9 kg
dimension Optional	JSON Object - Value (string) - Unit (cm3) : float	Dimension of the shipment. To provide the value and unit code, separated by a space. Example: 372.3 cm3

payment Optional	JSON Object - type (string) : cod/non_cod - cod_amount (int)	Add payment type cod/non_cod
destination Required	JSON Object	Add destination address fields. Allows users to define address details for the shipment's intended recipient.
destination (region_code) Required	String	Region code of the recipient.
destination (name) Required	String	Recipient's name
destination (phone_number) Required	String	Phone number for the person related to the address.
destination (address) Required	String	Recipient address details.
destination (coordinate) Optional	JSON Object - Latitude (float) - Longitude (float)	Coordinate of latitude and longitude related to the address.
origin Required	JSON Object	Add origin address fields. Allows users to define address details for the shipment's sender.
origin (origin_code) Required	String	Region code of the sender.
origin (name) Required	String	Name of the sender.
origin (phone_number) Optional	String	Phone number of the sender.
origin (address) Optional	String	Sender address details.

origin (coordinate) Optional	JSON Object - Latitude (float) - Longitude (float)	Coordinate of latitude and longitude related to the address.
